

COPULATION DURATION IS RELATED TO AT LEAST EIGHT FACTORS IN FOREST RED MILLIPEDES *CENTROBOLUS* COOK, 1897

M. I. Cooper
University of Cape Town

Abstract- Eight factors were tested for correlations with copulation duration in red millipedes *Centrobolus*. Lowest relative humidity ($r=-0.9034$, $r^2=0.8161$, Z Score=-2.10804123, $n=5$, $p=0.035733$), month with the highest number of rainy days ($r=-0.9217$, $r^2=0.8495$, $n=4$, 4, $p=0.001118$), minimum temperature ($r=-0.9688$, $r^2=0.9386$, $n=4$, 4, $p=0.000073$), temperature ($r=-0.7237$, $r^2=0.5237$, $n=4$, 4, $p=0.042282$), precipitation ($r=0.9054$, $r^2=0.8197$, $n=4$, 4, $p=0.001969$), curved surface area ($r=0.6704$, $r^2=0.4494$, $n=5$, $p=0.03403$), maximum precipitation (Spearman's $r=0.87208160$, Z score=1.84297608, $n=5$, $p=0.03266619$), and altitude (Kendall's $\tau=0.44721360$, Z score=40000, $p=0$) correlated with copulation duration.

Keywords: Red Millipedes, sunshine, moments.

I. INTRODUCTION

Red millipedes are found in the southern African subregion with northern limits on the east coast being about -17° latitude S and southern limits being -35° latitude S. They are well represented in the littoral forests of the eastern half of the subcontinent [1-287]. It consists of taxonomically important species with 12 species considered threatened and includes nine vulnerable and three endangered species [226]. It occurs in all the forests of the coastal belt from the Cape Peninsula to Beira in Mozambique [225]. These worm-like millipedes have female-biased sexual size dimorphism [57]. Here, eight factors were tested for correlations with copulation duration in *Centrobolus* Cook, 1897.

II. MATERIALS AND METHODS

Copulation durations were recorded in 4 species of southern African *Centrobolus* [1]. Width measurements (mm) were halved to get radii (r). The surface areas (mm^2) were calculated based on the equation $2 \cdot \pi \cdot r \cdot (r + h)$ for males and females. A correlation between copulation duration and seven climatic factors were generated at <https://www.socscistatistics.com/tests/pearson/default.aspx> (Appendix 1-9).

Climatic factors were obtained for each locality at <https://en.climate-DATA.ORG..>

III. RESULTS

Lowest relative humidity was correlated with copulation duration (Fig. 1: $r=-0.9034$, $r^2=0.8161$, $n=5$, $p=0.035733$).

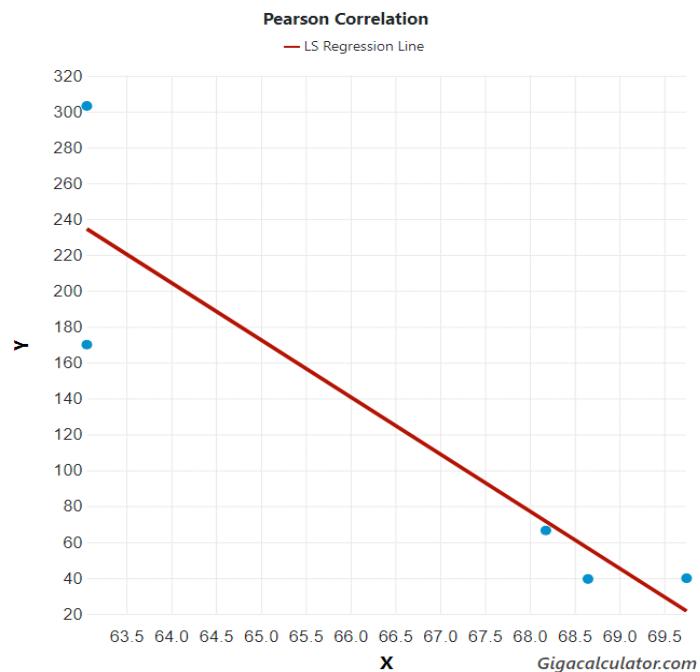

Fig. 1. Correlation between copulation duration (x) and lowest relative humidity (y) across the range of *Centrobolus* Cook, 1897.

Copulation duration was correlated with month with the highest number of rainy days ($r=-0.9217$, $r^2=0.8495$, $n=4$, 4, $p=0.001118$).

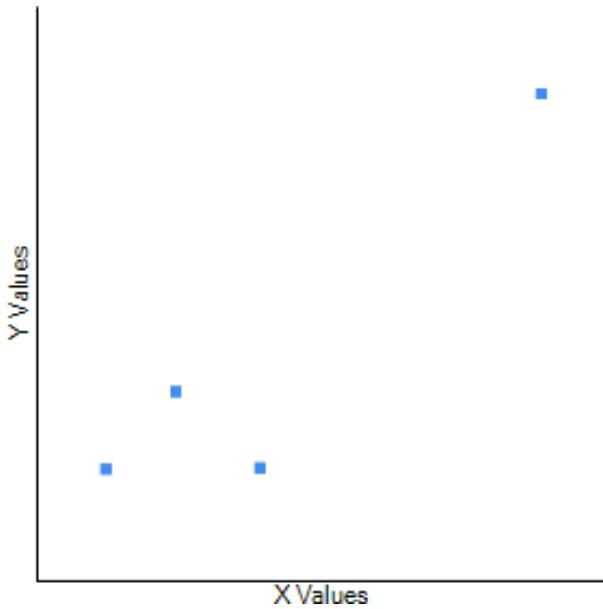

Fig. 2. Correlation between copulation duration (y) and month with the highest number of rainy days (x) across the range of *Centrobolus Cook, 1897*.

The copulation duration was correlated with minimum temperature (Fig. 3: $r=-0.9688$, $r^2=0.9386$, $n=4$, 4, $p=0.000073$).

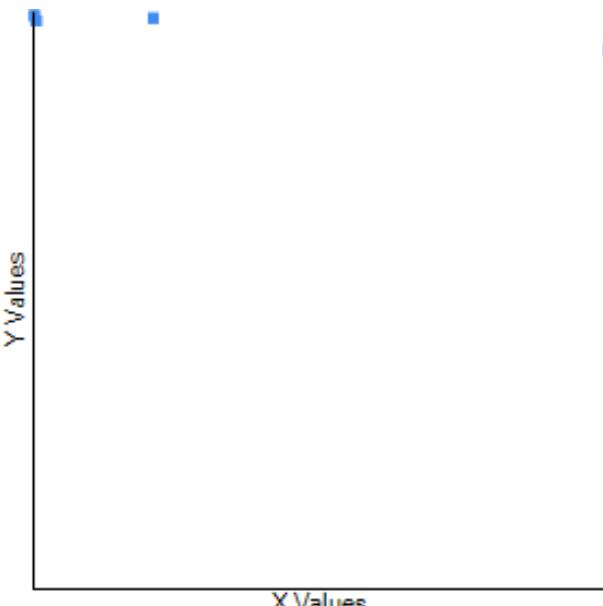

Fig. 3. Correlation between the copulation duration (X) and minimum temperature (Y) across the range of *Centrobolus Cook, 1897*.

The copulation duration was correlated with temperature (Fig. 4: $r=-0.7237$, $r^2=0.5237$, $n=4$, 4, $p=0.042282$).

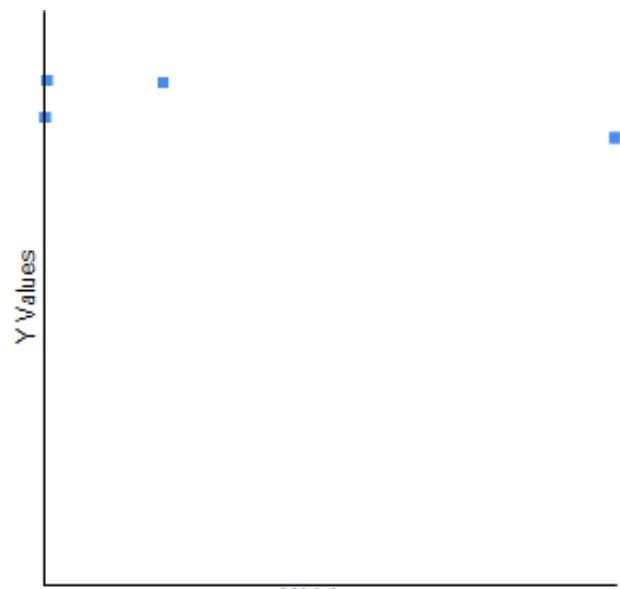

Fig. 4. Correlation between the copulation duration (X) and temperature (Y) across the range of *Centrobolus Cook, 1897*.

The copulation duration was correlated with precipitation (Fig. 5. $r= 0.9054$, $r^2=0.8197$, $n=4$, 4, $p=0.001969$).

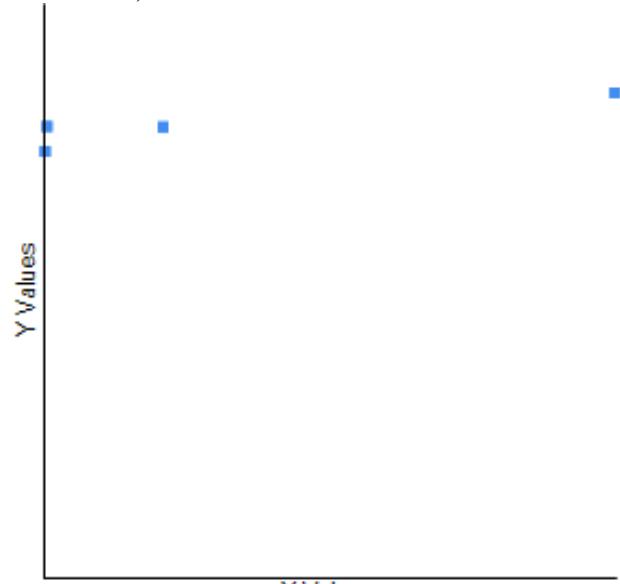

Fig. 5. Correlation between the copulation duration (X) and precipitation (Y) across the range of *Centrobolus Cook, 1897*.

Curved surface area was correlated with copulation duration (Fig. 6: $r= 0.6704$, $r^2=0.4494$, $n=5$, $p=0.03403$).

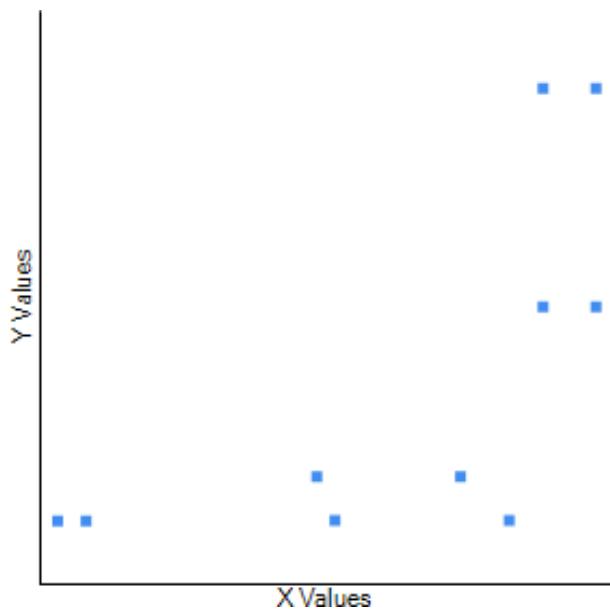

Fig. 6. Correlation between copulation duration (y) and curved surface area (x) across the range of *Centrolobus* Cook, 1897.

Maximum precipitation was correlated with copulation duration (Fig. 7: Spearman's $r=0.87208160$, Z score=1.84297608, $n=5$, $p=0.03266619$).

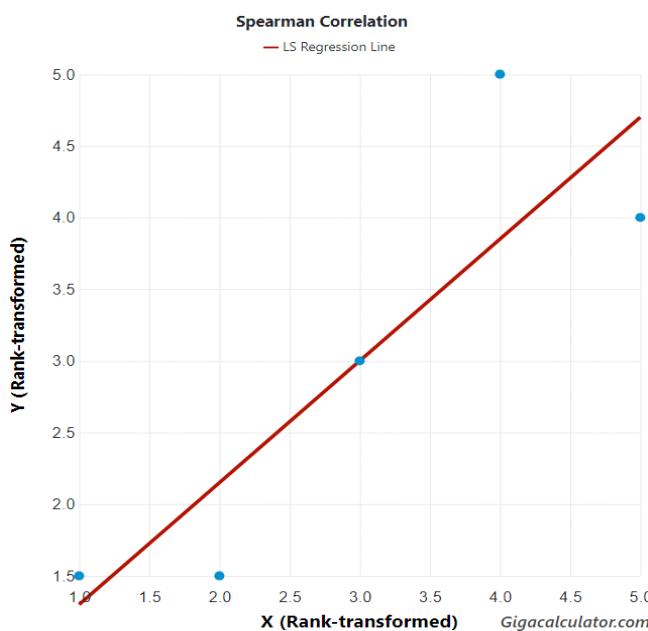

Fig. 7. Correlation between copulation duration (x) and maximum precipitation (y) across the range of *Centrolobus* Cook, 1897.

Altitude was correlated with copulation duration (Fig. 8: Kendall's $\tau=0.44721360$, Z score=40000, $p=0$).

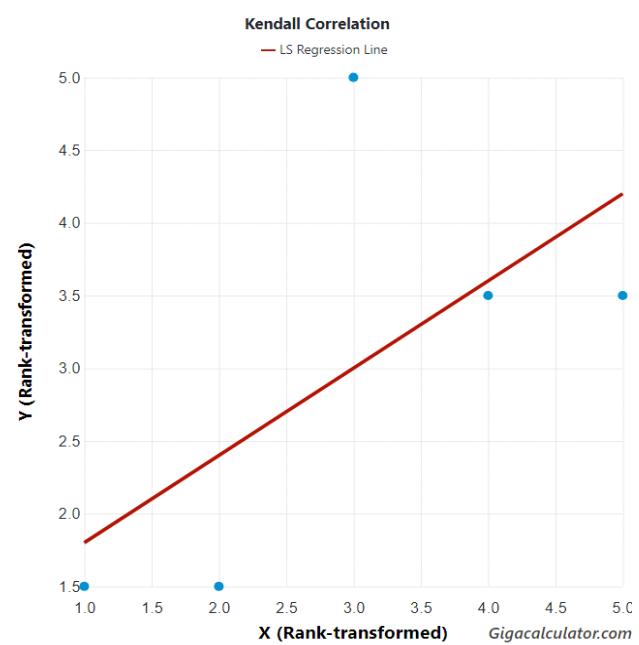

Fig. 8. Correlation between altitude (y) and copulation duration (x) across four species of *Centrolobus* Cook, 1897.

IV. DISCUSSION

There is a correlation between copulation duration with at least eight factors (seven climatic factors) in *Centrolobus*.

APPENDIX 1. The copulation durations (minutes) in *Centrobolus* Cook, 1897.

170
66.4
39.8
303
39.4

APPENDIX 2. Lowest relative humidity (%) across the range of

Centrobolus Cook, 1897 for which mass were recorded.

63.06
68.18
69.75
63.06
68.65

APPENDIX 3. Month with the highest number of rainy days in *Centrobolus* Cook, 1897 where copulation durations were recorded.

13.73
13.97
15.23
14.26
13.73
13.97
15.23
14.26

APPENDIX 4. Minimum temperature (degrees Celsius) for four species of

Centrobolus Cook, 1897.

19.9 39.8, 103

19.8 303, 119

18.7 39.4, 109

19.7 **APPENDIX 9.** Altitude across four species (male then female) of

19.9 *Centrobolus* Cook, 1897 for which mass were recorded.

19.8 38

18.7 9

19.7 48

APPENDIX 5. Temperature (degrees Celsius) for 38

four species of

Centrobolus Cook, 1897.

20.4

21.9

19.5

22.0

20.4

21.9

19.5

22.0

APPENDIX 6. Precipitation (mm) for four species

of *Centrobolus* Cook, 1897.

893

944

1015

945

APPENDIX 7. Curved surface area across four species (male then female) of *Centrobolus* Cook, 1897 for which mass were recorded.

1764.318

2221.734

2483.743

2652.133

2483.743

2652.133

1822.124

2376.301

1030.442

939.965

APPENDIX 8. The copulation durations (minutes) followed by maximum precipitation (mm) *Centrobolus* Cook, 1897.

170, 119

66.4, 113
