

LATITUDINAL SPECIES RICHNESS IN SOUTHERN AFRICAN MILLIPEDES IS CORRELATED WITH MINIMUM PRECIPITATION, MAXIMUM PRECIPITATION, MAXIMUM TEMPERATURE, PRECIPITATION VARIATION, LOWEST RELATIVE HUMIDITY, DISTANCE TO THE NEAREST AIRPORT, LATITUDE, LONGITUDE, AND LONGITUDINAL SPECIES RICHNESS

M. COOPER

UNIVERSITY OF THE WITWATERSRAND.

ABSTRACT. Nine factors were correlated with latitudinal species richness in Southern African millipedes, minimum precipitation ($R=0.1864$, $R^2=0.03476$, $N=136$, $P=0.02977$), maximum precipitation ($R=-0.2782$, $R^2=0.07739$, $N=136$, $P=0.001041$), maximum temperature ($R=-0.15176619$, $Z \text{ SCORE}=-1.76387978$, $N=136$, $P=0.03887606$), precipitation variation ($R=-0.2474$, $R^2=0.06121$, $N=136$, $P=0.003686$), lowest relative humidity ($R=0.1978$, $R^2=0.03914$, $N=136$, $P=0.02096$), distance to the nearest airport ($R=-0.3268$, $R^2=0.10698$, $N=136$, $P=0.0001029$), latitude ($R=-0.4133$, $R^2=0.1708$, $N=136$, $P=5.709e-7$), longitude ($R=-0.2106$, $R^2=0.04437$, $N=136$, $P=0.01384$), and longitudinal species richness ($R=0.3372$, $R^2=0.1137$, $N=136$, $P=0.00005959$). Mean latitudinal species richness was 8.485 species, and the Standard Deviation, σ , was 5.387 species ($n=136$). Variance in latitudinal species richness (s^2) was 29.015 species.

keywords: latitude, millipede, richness, species, weather.

I. INTRODUCTION

Southern African millipedes are made up of 71 genera; however, a subsample of major genera may provide indicators for determining millipede dynamics because of their distribution.

In this paper, nine factors are tested for a relationship with latitudinal species richness using the seven groups viz. *Antiphonus*, *Aulodesmus*, *Centrobolus*, *Polyxenida*, *Sphaerotheriidae*, *Ulodesmus*, and *Attemsodemus*.

II. MATERIALS AND METHODS

Nine factors were obtained for 136 localities of millipedes given in a checklist of Southern African millipedes at <https://en.climate-data.org/>. These included *Antiphonus* Attems, 1901 ($n=4$), *Aulodesmus* Cook, 1896a ($N=4$), *Centrobolus* Cook, 1897 ($N=40$), *Polyxenida* Lucas, 1840 ($n=6$), *Sphaerotheriidae* Brandt, 1833 ($n=51$), *Ulodesmus* Cook, 1899b ($n=30$), and *Attemsodemus* Lawrence, 1953 ($n=1$). Latitudinal species richness was calculated from the number of species per unit latitude. A Basic Stats correlation was performed at <https://www.statskingdom.com/correlation-calculator.html>.

Means were calculated at <https://www.calculatorsoup.com/calculators/statistics/average.php>. Standard deviations were calculated at <https://www.calculator.net/standard-deviation-calculator.html>.

III. RESULTS

The following nine correlations with latitudinal species richness were found in southern African millipedes,

MINIMUM PRECIPITATION (Fig. 1)

$R=0.1864$, $R^2=0.03476$, $N=136$, $P=0.02977$

Figure 1. Correlation with latitudinal species richness of minimum precipitation in southern African millipedes.

MAXIMUM PRECIPITATION (Fig. 2)

$R=-0.2782$, $R^2=0.07739$, $N=136$, $P=0.001041$

Figure 2. Correlation with latitudinal species richness of maximum precipitation in southern African millipedes.
MAXIMUM TEMPERATURE (Fig. 3)
 $R=-0.15176619$, $Z\text{ SCORE}=-1.76387978$, $N=136$, $P=0.03887606$

Figure 3. Correlation with latitudinal species richness of maximum temperature variation in southern African millipedes.
PRECIPITATION VARIATION (Fig. 4)
 $R=-0.2474$, $R^2=0.06121$, $N=136$, $P=0.003686$

Figure 4 Correlation with latitudinal species richness of precipitation variation in southern African millipedes.
LOWEST RELATIVE HUMIDITY (Fig. 5)
 $R=0.1978$, $R^2=0.03914$, $N=136$, $P=0.02096$

Figure 5. Correlation with latitudinal species richness of the lowest relative humidity in southern African millipedes.

DISTANCE TO THE NEAREST AIRPORT (Fig. 6)
 $R=-0.3268$, $R^2=0.10698$, $N=136$, $P=0.0001029$

Figure 6. Correlation with latitudinal species richness of distance to the nearest airport in southern African millipedes.

LATITUDE (Fig. 7)
 $R=-0.4133$, $R^2=0.1708$, $N=136$, $P=5.709e-7$

Figure 7. Correlation with latitudinal species richness of latitude in southern African millipedes.

LONGITUDE (Fig. 8)
 $R=-0.2106$, $R^2=0.04437$, $N=136$, $P=0.01384$

Figure 8. Correlation with latitudinal species richness of longitude in southern African millipedes.

LONGITUDINAL SPECIES RICHNESS (Fig. 9)
 $R=0.3372$, $R^2=0.1137$, $N=136$, $P=0.00005959$

Figure 9. Correlation with latitudinal species richness of longitudinal species richness in southern African millipedes.

IV. DISCUSSION

Nine factors correlated with latitudinal species richness in southern African millipedes. Six were negative correlations (maximum precipitation, precipitation variation, maximum temperature, distance to the nearest airport, latitude, and longitude), and three were positive (minimum precipitation, lowest relative humidity, and longitudinal species richness). This, in addition to the one negative correlation with temperature, brings the number of known factors that correlate with latitudinal species richness in southern African millipedes to twelve because precipitation and the month with the highest number of rainy days are also correlated in forest millipedes.
